Dear Mr. Raby and Mr. Bateman,

Thank you so much for providing The Ohio State University Medical Center and The OSU College of Medicine Research community your foolproof laboratory fume hood monitoring systems. Our faculty, research associates and maintenance staff know fume hood safety is now maintenance programmatic, regulatory compliant, and most importantly they're safety is our priority.

Since installed your product has performed flawlessly for over four years without one (1) single failure in hundreds of labs. Your professional installers and schedule coordination support were most helpful in assisting a smooth installation, in more than 17 working lab (Research and Clinical) facilities. Your scheduled punctuality and efficiencies to minimize installations during ongoing research was just a couple of reasons for my writing. Gone are the days when we would see a tissue paper as the airflow monitor to protect users.

We are so pleased with your product that we hope to offer our recommendation to any prospective organization in need. I also wanted you both to know "You are making a difference at The Ohio State University"

Thank you.

A handwritten signature in blue ink that reads "Ron".

Ron A. Henthorn
